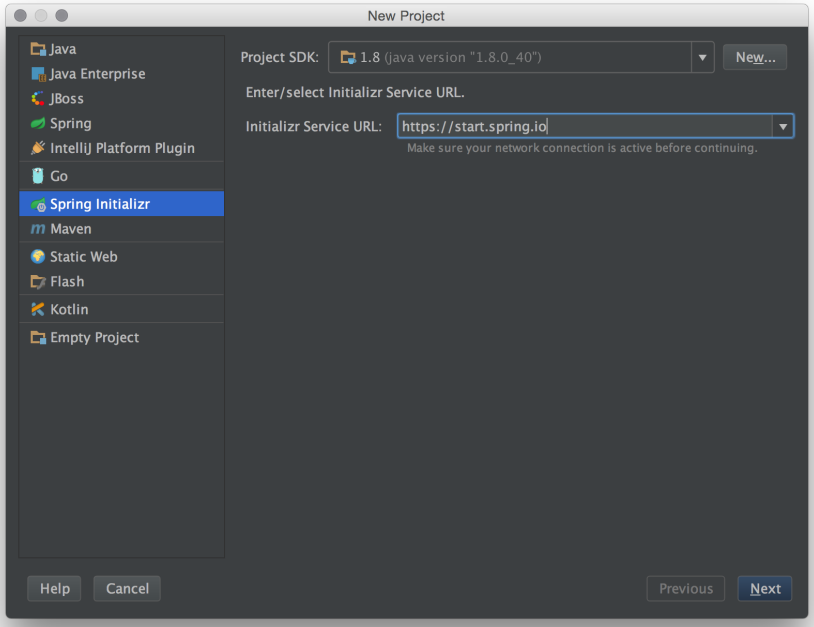
#3 Hello Spring

Tutorial: Build a spring boot application using intellij idea

Create your new project with intellij

Open up IntelliJ and click on the Create New Project option.

Next, select Spring Initializr from the project type in the left panel, select your Project SDK and then click Next. The Initializr Service URL should already be populated.



New Project
Java
Java Enterprise
JBoss
Spring
IntelliJ Platform Plugin
Go
Spring Initializr
Maven
Static Web
Flash
Kotlin
Empty Project
Project SDK:
1.8 (java version "1.8.0_40")
New...
Enter/select Initializr Service URL.
Initializr Service URL:
https://start.spring.io
Make sure your network connection is active before continuing.

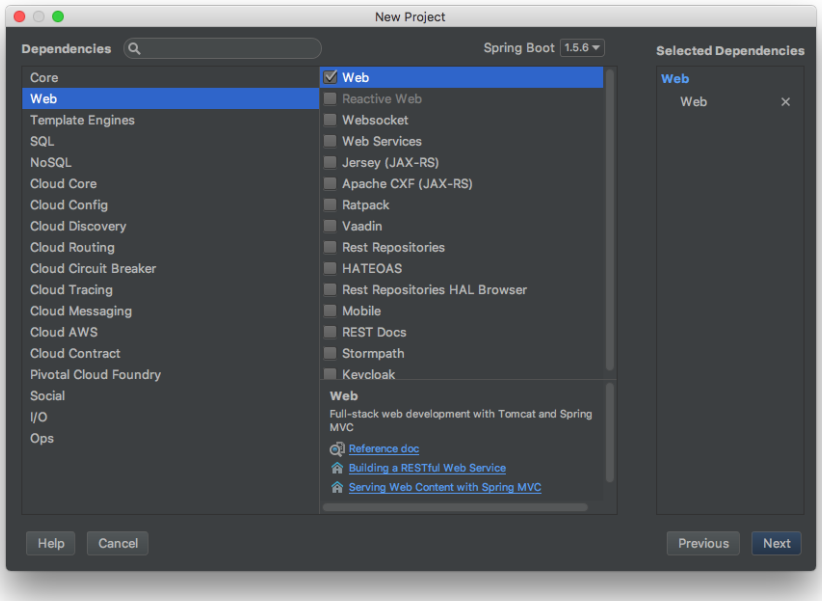
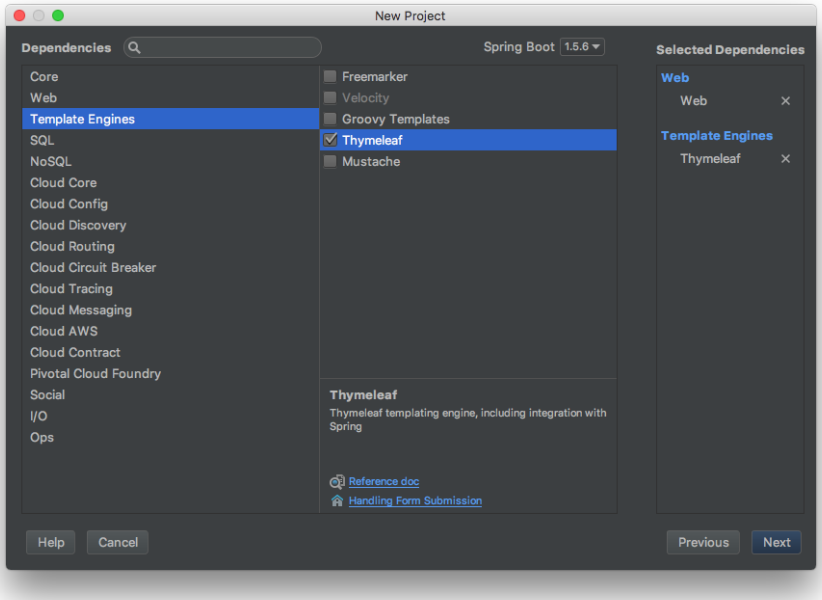
Next select any Spring Framework dependency your project will require. here you should choose * Web -> Web * Template Engines -> Thymeleaf

Click Next once you've selected all your dependencies.





(heavily inspired by https://patrickgrimard.io/2014/08/14/how-to-build-a-spring-boot-application-using-intellij-idea/)
